

Universal use

- All welding processes possible: Standard, LSC, Puls, PMC, CMT
- New options: CMT Additive Pro, CMT Cycle Step

Maximum wirefeeding flexibility

- Equipped with perfectly synchronized wire feeders
- The large range enables the wire drum to be individually positioned

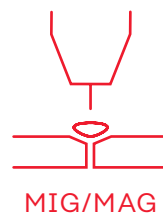

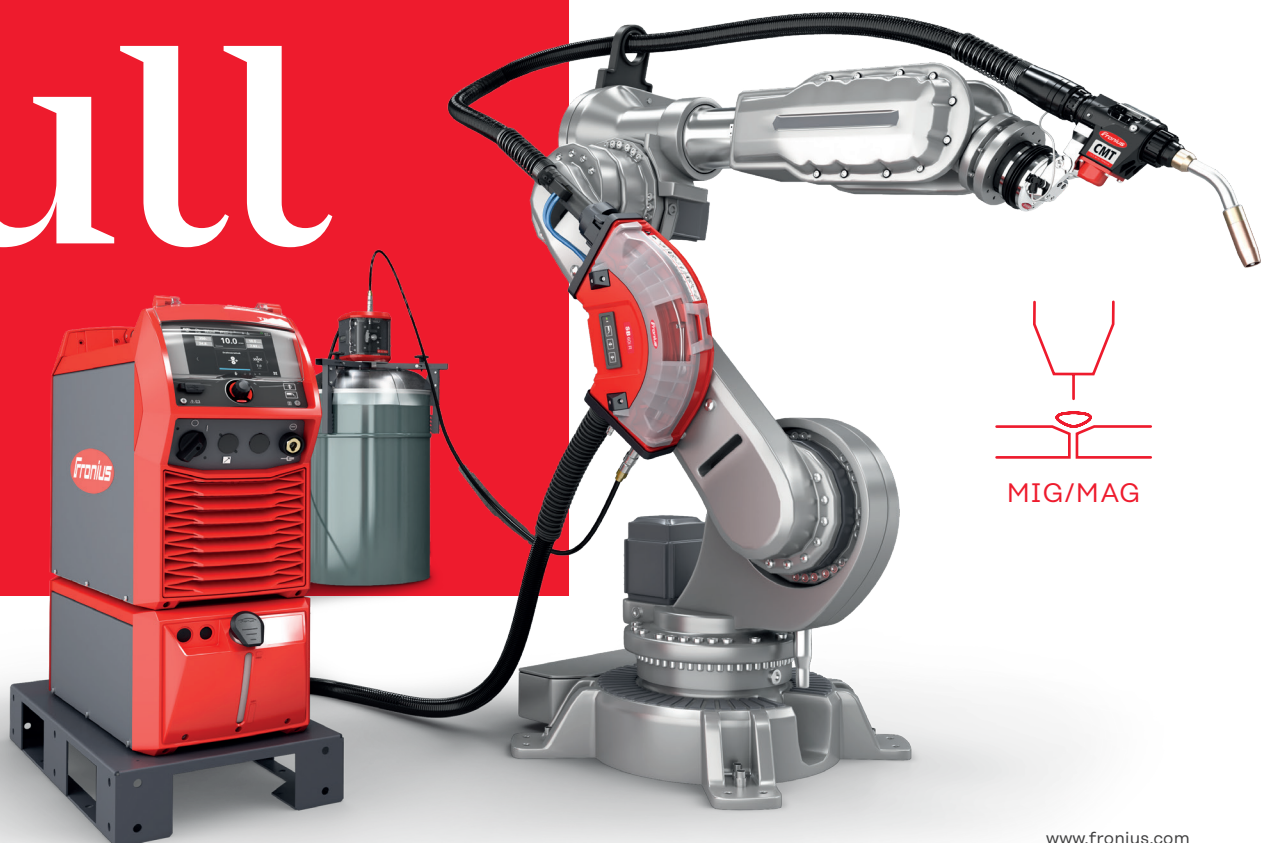

Welding with absolute stability using Cold Metal Transfer

- Less rework thanks to practically spatter-free welding, e. g. Steel with 100 % CO₂
- Extremely stable short arc with low heat input
- Gap-bridging ability
- Suitable for welding the thinnest materials up to 0.3 mm
- Special material joints are possible, e. g. steel/aluminium, copper, zinc, titanium, magnesium, etc.
- Cladding with little dilution
